

Axel components

Axel components

The axles or differentials are a fundamental part of the machine, they are responsible for transmitting the power they receive from the transmission to the wheels. In them through its set of pinions, axel shaft and ring gear, the speed is reduced while increasing the torque to drive the equipment, that is why the quality of its materials is so important.

Blumaq supplies both complete differentials and spare parts for its repair. Our spare parts range for differentials combines bearings selected among leading industrial bearing manufacturers with forged and machined gears to which we apply the same treatments used by the original manufacturer of your construction and mining equipment.

Blumaq offers more than 90.000 item numbers in stock, and the most detailed specifications report for all their products.

CATERPILLAR®, KOMATSU®, CUMMINS®, VOLVO® and CASE® are trade marks registered by their owners and they are only used as an application reference for our spare parts.
