

Tooth and adapters,
optimum efficiency and great durability

Ground engaging tools

Blumaq's ground engaging tools are compatible with the machinery of major brands on the market.

The bucket tooth system is exposed to extreme stresses when it encounters a combination of hard materials, shock and high breakout forces. In such environment it is impossible to eliminate wear, but it is possible to reduce the effect it has on the tooth system of the machine. Our big challenge is to design a tooth system optimized for the forces and wear to which it is exposed. Such a system of teeth provides optimal useful life with sustained performance.

The design and selection of materials of the highest resistance and durability make this tooth system the most suitable for your machine.

A better penetration capacity will provide you:

- Better and faster filling of the bucket
- Reduced bucket, machine and tire wear
- Lower fuel consumption

The use of a good wear system guarantees a long useful life for your machine thanks to:

- The use of high-quality steel alloy.
- Designed to maximize working hours.
- Better fit between adapter and tooth.

Reduction of replacement times:

- Lower maintenance costs
- Increased productivity

Classification of the bucket tooth system

Suitable for
Volvo machines
